

Global warming – Greenhouse effect

What is global warming?

The earth is heating up. Both oceans and land are warmer now than they were when record keeping began, in 1880, and the temperatures are rising crucially. This rise in heat is global warming. The rise in heat is caused by humans. The burning of fossil fuels has released greenhouse gases in the atmosphere, which trap warmth from the sun and make the earth's surface warm.

What is the greenhouse effect?

Some of the infrared radiation passes through the atmosphere, but most is absorbed and re- emitted in all directions by greenhouse gas molecules and clouds. The effect of this is to warm the Earth's surface and the lower atmosphere.

Animal's extinction-Deforestation

Endangered species

Up to one million plant and animal species face extinctic because of human activities Some of them are :Giant Pandas, Tiger, Gorilla, Kareta kareta sea turtle, blue whale, Asian elephant and many other animals around the world.

Deforestation

Deforestation is the cutting down of trees in the forest in a large number. Deforestation has always been a threat to our environment. Moreover, it is causing ecological imbalance. The main purpose of deforestation is to increase the land area. The result of deforestation is to have less trees and less oxygen, as trees absorb carbon dioxide and release oxygen to the atmosphere.

Pollution

Pollution is the process of making land, water, air or other parts of the environment dirty and not safe or suitable to use. Land can become polluted by household garbage and by industrial waste. Water pollution happens when chemicals or dangerous foreign substances are introduced to wate. Last air pollution is mostly caused by cars and factories.

Environmental problems in my town

In my town there are two serious environmental problems. First of all there are garbage all over the streets, caused by locals, who do not throw them in the bins. Also there are some factories nearby that cause a small amount of pollution in the air.

There are many ways to help our planet such as recycling, reusing old things, using our car less and planting trees.
